## Introducing a Perfect SIP Business Telephone System for Cloud Telephony Service

*Brekeke and VTech Confirm Interoperability Between Brekeke PBX and VTech ErisTerminal SIP Phones and ErisStation*

**San Mateo, CA - July 21, 2016** – VTech Communications, Inc., a global leader and manufacturer of SIP-based phones, and Brekeke Software, developer of SIP telephony software for enterprises and service providers, announced today that VTech SIP-based ErisTerminal® business and ErisStation® conference phones are now compatible with Brekeke PBX. With this announcement, service providers and users using Brekeke PBX will benefit from having high-quality and affordable SIP phones equipped with all latest and essential features for a business phone system.

Brekeke PBX is known for its reliability, scalability and adoption of cutting-edge technology. Brekeke PBX comes in two editions: the Single-Tenant Edition is a CPE (Customer Premise Equipment) type of IP-PBX, and the Multi-Tenant Edition is a hosted PBX platform. The phone system built with Brekeke can grow as business grows and always enjoy the latest technology available to the current market. The latest version of Brekeke PBX supports WebRTC that allows audio and media communications via a web browser, and SDN/OpenFlow support that allow dynamic and smart management of telephony network. Brekeke PBX comes with an abundant list of PBX features, ranging from popular office phone features like BLF (Busy Lamp Field), SCA (Shared Call Appearance), Call Recording, and Call Conference to call center features like Call Queue and Call Monitoring which are all confirmed with VTech's Eris-series.

“We’ve worked with many SIP phone devices, and I found that VTech phones are one of the very best SIP phones that offer high-quality manufacturing and technology in affordable pricing. It is also nice that they are providing wireless options as well as desktop version,” said Shin Yamade, CEO of Brekeke Software. “VTech phones will be popular for business office use, but also will be a perfect device for a cloud hosted services that focuses for businesses,” added Yamade.

VTech ErisTerminal SIP phones, available in feature-rich desktop as well as convenient cordless models, leverage different cloud and hosted telephony solutions without negatively impacting network traffic. Among the options for desktop models are the VSP725 and the VSP735, which offer high-quality audio and support for multiple lines. The cordless handset option, the VSP601, shares the same HD audio and support for multiple lines as the desktop models with added mobility. Because they all use DECT 6.0 technology, these products provide a clear connection and are easily expandable with additional cordless accessories.

---

The system can be expanded up to an unlimited number of desktop phones, and up to six cordless handsets for every one VSP600 cordless base station. This means users can leave their desk and enjoy DECT 6.0 sound quality and reception on a cordless handset. The corded phone models also feature power over Ethernet (PoE) with dual Ethernet ports. Using this technology, employees at a business like an auto dealership, manufacturing facility or retail store could place base phones throughout the facility and easily move up to 150 feet away using a cordless handset.

“We are excited to partner with Brekeke to bring more SIP options to service providers and end-users. Brekeke’s IP-PBX solutions, combined with VTech’s SIP phones, add flexibility and increase productivity in the workplace,” said Graham Williams, vice president, Business Phones Division, VTech Communications.

#### **About Brekeke Software, Inc.**

Brekeke Software, Inc., is an industry-leading developer of SIP (Session Initiation Protocol) software products for IP network communications. All of our products are proudly developed by our in-house engineers, who appreciate well-designed, reliable products. We design and develop all of our products with great care and attention to detail, which is clearly evident in the wide array of high-quality products that we offer today. Brekeke products set such a high standard in quality and reliability that they are deployed as mission-critical communication platforms for healthcare systems, military and emergency communication systems, mass-communication environments such as call centers and financial institutions, and SIP telephony platforms for a large number of SIP applications and SIP telephony networks. Founded in 2002, Brekeke is headquartered in San Mateo, California. For more information, please visit <http://www.brekeke.com>.

#### **About VTech**

VTech provides a diverse collection of telecommunication products that elevate the business consumer experience through state-of-the-art technology and design. The Group’s business phones scale from small operations to enterprise-level corporations. They are sold through a wide network of trusted partners and are backed by industry-leading warranties and U.S.-based training and support. The company has recently added an award-winning collection of SIP phone systems, featuring compatibility with hosted and open-source PBX platforms.

Founded in 1976, VTech is the world’s largest manufacturer of cordless phones and the global leader in electronic learning products from infancy through toddler and preschool. It also provides highly sought-after contract manufacturing services. VTech’s mission is to design, manufacture and supply innovative and high-quality products in a manner that minimizes any impact on the environment, while creating sustainable value for its stakeholders and the community.
